A. Introduction to Cybersecurity

1. Offensive Security Intro

Here is the link to my completed module:

https://tryhackme.com/room/offensivesecurityintroKx12?utm_campaign=social_share&utm_medium=social&utm_content=share-completed-room&utm_source=copy&sharerId=696bd63bc473a963f5ed5ebf

1.0 Think Like a Hacker

Got to understand the whole concept about Offensive Security and what it entails and also its differences compared to Defensive Security.

The screenshot displays a web browser window with the URL `tryhackme.com/room/offensivesecurityintro`. The browser's address bar and tabs are visible at the top. Below the browser window, a green banner indicates "Room completed (100%)". The main content area shows "Task 1" with a green checkmark and the title "Think like a Hacker!". The task description states: "Offensive Security is about thinking like an attacker to find weaknesses before real hackers do. In this room, you'll hack your first website in a safe and legal environment to see how ethical hackers operate." Below this, a prompt asks to "Answer the questions below" and poses the question: "Which term describes simulating a hacker's actions to find weaknesses?". Two radio button options are provided: "Offensive Security" (selected) and "Defensive Security". A green button labeled "Correct Answer" is visible next to the selected option. At the bottom, a list of tasks is shown: "Task 2 Starting the Lab" and "Task 3 Find Hidden Pages", both with green checkmarks and expandable icons.

1.1 Starting the Lab

I was able to connect to the target machine successfully and got the Bank Account Number: 8881

The screenshot shows the TryHackMe interface with the 'Starting the Lab' task selected. The task description states: 'This room uses a virtual desktop to simulate a real system. Click the button below to get started!' and 'A browser will automatically open, displaying FakeBank, a fake banking application. This is what you will be targeting.' The 'View Site' button is highlighted. Below the description, a question asks: 'What is the bank account number in the FakeBank application?' with the answer '8881' entered and marked as 'Correct Answer'. The virtual desktop on the right shows the FakeBank application with the account number 8881 and a balance of -\$1,232.32. The application also shows a credit card with 'Approval pending' and a transaction for 'Fast Food McDonalds' for -\$17.11.

1.2 Finding Hidden Pages

Learnt how to use the *dirbuster*, a hacking tool to find hidden pages and how the hidden pages look like. Got to access the pages via Command Prompt:

The screenshot shows the TryHackMe interface with the 'Finding Hidden Pages' task selected. The task description states: 'To find hidden pages using Dirbuster, we will use `dirb` and the URL that we wish to search:'. The command `dirb http://fakebank.thm` is entered in the terminal. The output shows: 'Any lines from the output that start with `+` are pages that have been found. Dirb will find two URLs.' The 'Answer the questions below' section asks: 'Dirb found one URL, `http://fakebank.thm/images`. What is the other hidden URL?'. The answer 'http://fakebank.thm/bank-transfer' is entered and marked as 'Correct Answer'. The Command Prompt window on the right shows the output of the `dirb` command, listing the found URLs: `http://fakebank.thm/bank-transfer` and `http://fakebank.thm/images`.

1.3 Attacking the Admin Page

Got to find a hidden admin panel that allowed me to deposit \$2500.

The screenshot shows the TryHackMe interface for the 'Offensive Security Intro' room, which is 75% complete. Task 4, 'Attack the Admin Page', is active. The instructions for Task 4 state: 'You should now have found a hidden admin panel that lets you add money to your account.' A 'View Site' button is provided. Below, it instructs the user to open a URL in a simulated browser, adding '/bank-transfer' to the end. The user is told to use account number 8881 and deposit \$2000 (or more). After depositing, they should return to the account page and confirm the balance is positive. A question box asks for the green words that appear as a pop-up. The simulated desktop on the right shows the 'FakeBank' 'Admin Portal' with a 'Deposit to account:' dropdown set to 'Acc 8881' and an 'Amount to deposit in USD:' field set to '2500'. A 'Deposit Money' button is visible. The desktop also shows a 'Safe & Secure Internet Banking' header and a 'Staff Account' section.

The screenshot shows the TryHackMe interface for the 'Offensive Security Intro' room, which is now 100% complete. Task 4, 'Attack the Admin Page', is marked as completed. The instructions for Task 4 are repeated. The simulated desktop on the right shows the 'FakeBank' 'Admin Portal' with a large 'BANK-HACKED' message overlay. The message says: 'Congratulations - You've hacked the bank! The answer to the TryHackMe question is: BANK-HACKED'. Below the message, a 'Deposit reference:' is shown as '827492-133', the 'Amount:' is '2500.00 USD', and the 'Date of deposit:' is '2026-01-30'. A 'Return to Your Account' button is at the bottom. The desktop also shows a 'Safe & Secure Internet Banking' header and a 'Staff Account' section.

2. Deffensive Security Intro

Here is the link to my completed module:

https://tryhackme.com/room/defensivesecurityintroQR?utm_campaign=social_share&utm_medium=social&utm_content=share-completed-room&utm_source=copy&sharerId=696bd63bc473a963f5ed5ebf

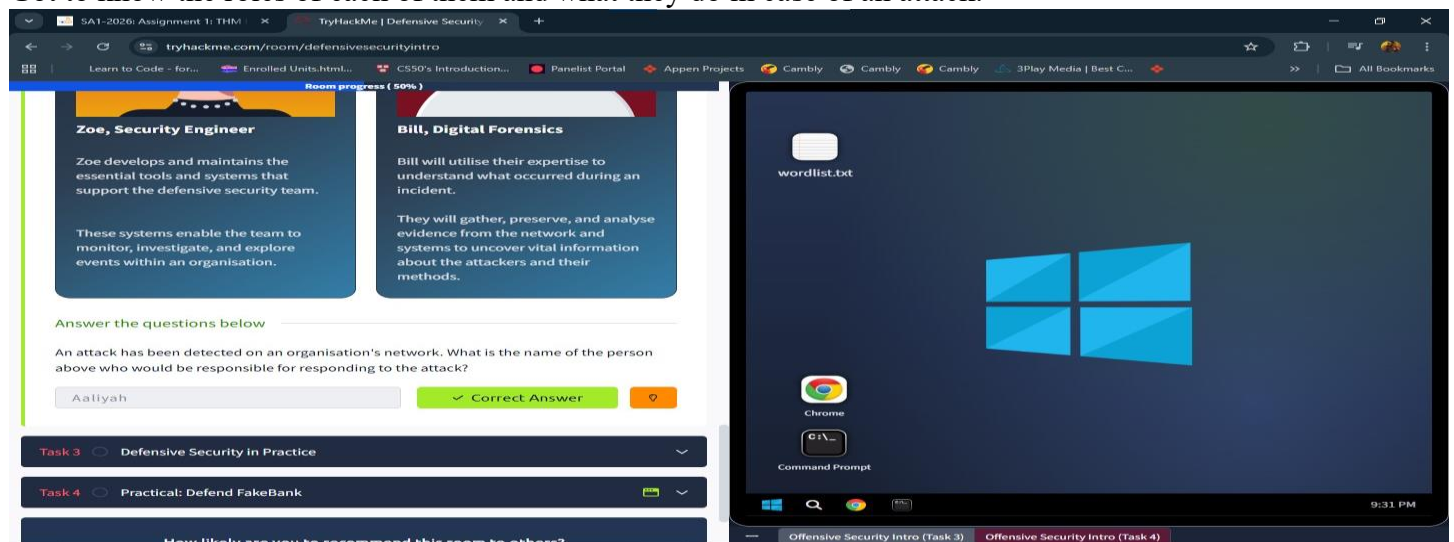

2.0 Attacking the Admin Page

In this module I was able to explore Defensive Security and the role they play in protecting networks and organizations. I also got to practice it in real time and finish tasks.

2.1 Responsibilities of Defensive Security

I got to understand the different professions within the defensive security and their day-to-day responsibilities. Got to know the roles of each of them and what they do in case of an attack:

2.2 Defensive Security in Practice

In this module, I learnt about how Security Operation Centre monitored and managed measures, which operates continuously to review alerts, investigate anomalies and respond to incidents.

Room progress (75%)

These professionals are often the eyes and ears on the frontline for protecting an organisation.

SIEMs: The Defensive Security Radar

Much like a control centre in the real world, SIEMs (Security Information and Event Management) systems are the central place for all data and information collected from security devices, workstations, servers, and more within an organisation.

Much like radar sweeping the digital environment, these systems are an absolutely critical part of any organisation's defensive security, as they offer insight into what is happening within the organisation's IT.

The systems inside an organisation produce a large amount of information. This information needs to be brought together in one central and easy-to-access place to understand what's happening quickly and clearly. This way, several people can review and analyse it quickly.

Answer the questions below

What is the abbreviation for the term "Security Operations Centre"?

SOC ✓ Correct Answer

Task 4 Practical: Defend FakeBank

2.3 Practical: Defend Fakebank

I investigated the 'Web Discovery Attack' and performed the necessary measures to prevent it.

Room completed (100%)

You will be joining the defensive security team for FakeBank, a large financial institution. You will be at the forefront of investigating and resolving suspicious events marked as such by FakeBank's sophisticated "Security Information and Event Management (SIEM)."

It is your duty to protect FakeBank and it's customers. Be proactive and inquisitive. To begin this practical, click on the green "View Site" button located below.

View Site

This action will open a "static site" on the right side of your screen. Investigate the "Web Discovery Attack" and perform the necessary, guided, protective measures to stop it from continuing.

Answer the questions below

What is the flag that you obtained by following along?

THM{FAKEBANK-SECURED} ✓ Correct Answer

3. Careers in Cyber

Here is the link to my completed module:

https://tryhackme.com/room/careersincyber5zy1sk0al?utm_campaign=social_share&utm_medium=social&utm_content=share-completed-room&utm_source=copy&sharerId=696bd63bc473a963f5ed5ebf

In this module, I was able to learn about the leading professions in Cybersecurity in depth. Got to understand the daily activities of some of the roles which include: Security Analyst, Security Engineering, and Penetration Testing. I answered the following topical questions:

The screenshot shows the TryHackMe interface for the 'Careers in Cyber' room. The browser address bar displays the URL: tryhackme.com/room/careersincyber. The room progress is at 20%. Task 1, 'Introduction', is active. The content includes a green header 'Want a career in cyber security? Explore what that could look like for you', a paragraph about cybersecurity career paths, a list of reasons to get a career in cyber (High demand, Strong salaries, Constant learning), and a question: 'How many unfilled cyber positions are there?'. The answer '3.5 million' is entered in the input field, and a green 'Correct Answer' button is visible. On the right, two achievement boxes show '72/335 Points Earned!' and '9/14 Questions answered!'. An illustration of a laptop and mouse is also present.

The screenshot shows the TryHackMe interface for the 'Careers in Cyber' room, now at Task 2: 'Security Analysis'. The room progress is at 40%. The content includes a section 'A Typical Day as a Security Analyst Involves:' with a list of activities, a 'Progression' section, and a question: 'Security analysts play a significant role in an organisation's ____?'. The answer 'defence' is entered in the input field, and a green 'Correct Answer' button is visible. On the right, two achievement boxes show '80/335 Points Earned!' and '10/14 Questions answered!'. Below the main content, a list of tasks is visible: Task 3 'Security Engineering', Task 4 'Penetration Testing', and Task 5 'Interactive: Career Quiz'.

SA1-2026: Assignment 1: THM TryHackMe | Careers in Cyb...

tryhackme.com/room/careersincyber

Room progress (60%)

For example, a Security Engineer will be responsible for maintaining an Intrusion Detection System (IDS), which can be considered a security camera within an organisation's digital environment.

Systems like these use a mixture of rules and intelligence to detect and prevent attacks from occurring.

A Typical Day as a Security Engineer Involves:

- Designing and maintaining security systems.
- Keeping up to date with the latest and greatest hacker techniques being used.
- Documenting processes and procedures.
- Assessing risk and making sure systems and applications are protected against vulnerabilities.

Progression

Security engineering is already a specialised defensive role, but you can go even deeper into areas like application security or cloud security. The skills you build here also transfer well into other fields, including offensive security.

Answer the questions below

What is the name for the type of device that a Security Engineer would be responsible for maintaining?

Intrusion Detection System

✓ Correct Answer

SA1-2026: Assignment 1: THM TryHackMe | Careers in Cyb...

tryhackme.com/room/careersincyber

Room progress (80%)

You may hear penetration testing referred to as "pentesting" or "ethical hacking." A penetration tester's job is to check how secure a company's systems and software are by safely trying to break into them.

They search for weaknesses and vulnerabilities and then test if those can be exploited - just like a real hacker would, but in a safe and controlled way. Everything is done under an agreement between the company and the pentester. **This process is known as an engagement.**

The results of these tests help the company understand risks and address problems before real cybercriminals can exploit them.

A Typical Day as a Penetration Tester Involves:

- Testing the security of computer systems, networks, and websites.
- Performing security assessments, audits, and analysing security policies.
- Analysing the results and creating reports, advising an organisation on how to prevent the attack from occurring.

Progression

Penetration testing is a strong starting point for an offensive security career. You can specialise in areas like network or web application testing, and later progress into red teaming, where you simulate full-scale, long-term attacks across an entire organisation, sometimes even involving physical intrusion. Red teaming is a senior, advanced progression from pentesting.

Answer the questions below

What process do penetration testers follow when testing an organisation for weaknesses?

engagement

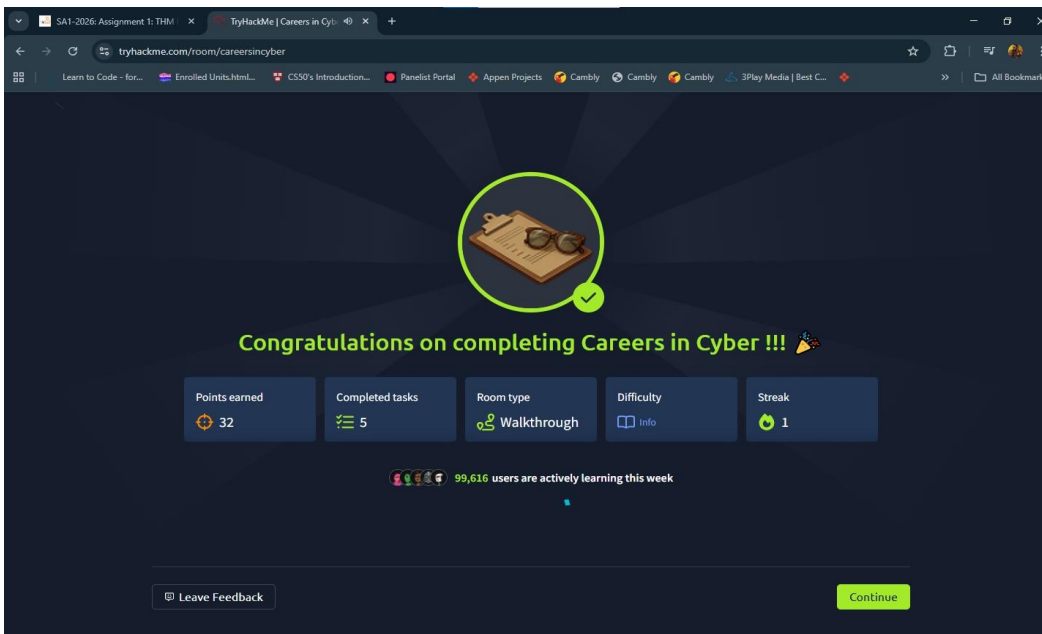

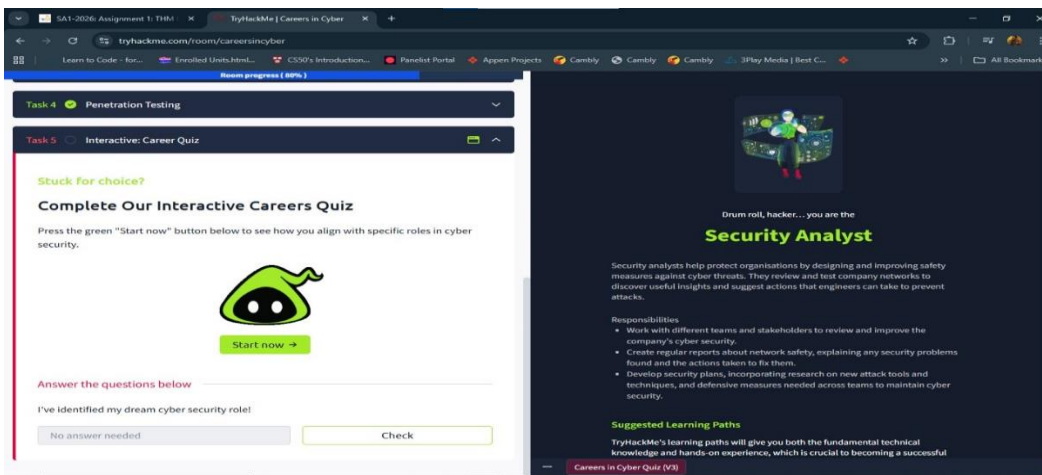

✓ Correct Answer

Task 5 ○ Interactive: Career Quiz

12/14 Questions answered! Levelling up in progress...

96/335 Points Earned! Levelling up in progress...

I also did a Careers quiz to identify a Cybersecurity path:

4. Conclusion and summary

This module introduces the different paths in cybersecurity: Defensive Security and Offensive Security. How each of them operates in the field of cybersecurity. The Offensive Security mainly deals with identifying vulnerabilities before they are exploited by attackers. Defensive Security on the other hand deals with monitoring, risk management and security controls to prevent and mitigate threats. Got to understand the different professions in Cybersecurity and their daily activities including the lead roles.
